PROJECTS

02/2022 – present

Socion, Automated Extraction of Emotions Based Recommendations

It is a mobile application which will detect the emotions of a person through his/her voice tone, face expressions and his/her text messages. Emotion detection is an emerging sub-domain of artificial intelligence and it can be used to generate good recommendations based on what emotion was detected. Socion is aimed to work on bilingual concept (English, Urdu) in case of emotion detection, particularly in the voice module.

09/2021 – 01/2022

Law Firm Website

Designed and developed a website for a law firm where a person can find lawyer for his/her case and can hire lawyer directly from there.

09/2020 – 01/2021

Restaurant Database Management System

It was a semester project, I worked in a team comprised of 2 teammates including me and we developed a Restaurant Database Management System for all record keeping of respective restaurant.
