## Project Management System

Jul 2023 - Nov 2023 (4 months)

**Company:** BITS Global Conculancy

**Tools:** PHP,Bootstrap

It was a complete employee management system which includes salary,attendance and project management modules

## Water Management System

Jul 2021 - Dec 2021 (5 months)

**Company:** LOVA

In this project we had three portal one is admin that have all access of every page one is manager that has access to limited page and last one is delivery boy that has access to only one page in which deliveries of current days are shown Admin can add deferent users or clients and delivery type of client i.e bottle or can and can enter advance amount of client and when a client's order comes and his bill is generated then he can do credit amount or cash and also have deferent features like counter sale expenditures billing factory stocks

## Students Eye Monitoring System

Aug 2020 - Jul 2021 (11 months)

**Company:** FYP

**Tools:** Python

In my FYP we monitor students consistency of how much he had watched a lecture provided by the teacher and his consistency will be measured by his eyeball movement . We had defined an angle and if eyeball will be in that angle graph will be positive otherwise it will be negative and thorough this graph we will calculate attendance of the student.
